

Royal Melbourne Hospital

DISTINCTIVELY MODERN

SureSteel®

At 160 years old, the Royal Melbourne Hospital is one of Victoria's oldest and most familiar institutions. With the assistance of CTA Australia, the new entrance to the foyer of the well known facility, which forms part of a multi-million dollar redevelopment, is both esthetically pleasing and safer.

The distinctive, modern entrance is now easier to locate and angled so as to invite visitors and patients into the building. The bright, light-filled space funnels people into a rejuvenated shopping precinct style foyer, which fans out between both the Royal Melbourne and Royal Women's Hospitals.

CTA's contribution to the project enhances the unique style of the entrance, while at the same time ensuring the new areas conform to the Disability Discrimination Act (1992). The Hospital has always been there for Victorians in times of need, and now CTA makes certain that all people, including those who are infirm or who have disabilities, can access the hospital safely and independently.

The new entrance to the hospital features SureSteel Tactile indicators

with stepped side face profile and concentric ring top surface. These tactiles mark both the foot and top of stairs, plus changes in gradient along the ramped sections of the entrance. They will withstand the wear and tear of this high traffic area as they are manufactured from one solid piece of 316 stainless steel, thereby ensuring the tactile head will never detach from the anchoring sprigot.

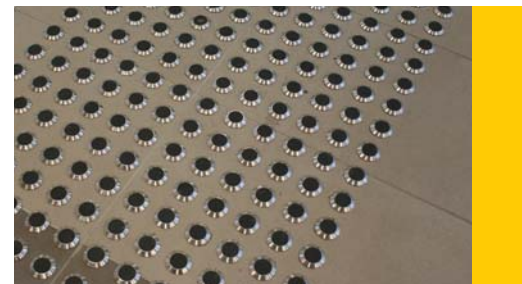

"This unique low cost system means that installation is as simple as drilling a hole and inserting the tactile"

The builders in this project took advantage of the new Drill&Lock technology so no adhesive, and therefore no drying time, was required. This unique low cost system means that installation is as simple as drilling a hole and inserting the tactile.

Peter Lo Bartolo of JA Dodd civil landscapers praised the Drill&Lock technology, saying "it is a very effective system and very efficient as patrons are able to use the installation immediately". He also mentioned that CTA "service

was fantastic and that over 10 thousand tactiles were installed in just two and a half days".

CTA's quality SureSteel Tactiles are designed to meet all aspects of the Australian Standard: Design for Access and Mobility - AS1428.4:2002. They have also achieved an anti-slip safety rating of R13, as tested by the CSIRO, and comply with the Building Code of Australia. Consequently, safety for all patients and visitors at the Royal Melbourne Hospital can be assured.

the only company in
australia with every
tactile solution
